⚛️ MDL YNOR ARCHITECTURAL SPECIFICATION (V2.3-FORMAL-SPEC)

Date: March 25, 2026 Principal Investigator: Charlier Rony Status: Certified Formal Specification [1.0/1.0]

🔬 ABSTRACT

MDL Ynor is a dissipative cognitive architecture founded upon the structural viability equation $\mu = \alpha - \beta - \kappa$. This framework ensures the thermodynamic equilibrium of autonomous agents through precise regulation of computational dissipation margins.

V2.3 Revision (March 2026):

- **Quantitative Systems Regulator**: Integrated Mu Margin Auditing for S&P 500 and NASDAQ-100 datasets.
- **Geodynamic Analytical Module**: Implementation of World Magnetic Model (WMM 2026) secular variation vectors.
- **Logical Isolation Substrate (V16.1)**: Enhanced structural isolation and Integrity Reclamation Protocols.
- **Formal Resolution of Millennium Problems**: DOI: 10.5281/zenodo.19181947.

🏛️ CHAPTER I: CORE ARCHITECTURAL SPECIFICATION

(Ref: MDL_YNOR_MASTER_PROMPT_COPY_ME.txt)

1.1 The Mu-Governance Loop

Objective: Ensuring systemic survival through the continuous optimization of the Mu margin (μ).

1.2 Mathematical Foundations

The Ynor architecture employs the master equation: $$\mu = \alpha - \beta - \kappa$$ Where:

- α: Dissipative Capacity (Logical Verification).
- β: Generative Pressure (Computational Cost).
- κ: Structural Inertia (Contextual Memory).

1.3 Operational Directives

"You function as the MDL Ynor Cognition Agent. Your objective is the analysis, auditing, and stabilization of complex dissipative systems via the Mu Stability Equation (μ = α - β - κ). Formal LaTeX notation is mandatory for all technical output."

📊 CHAPTER II: SYSTEMIC CONFIGURATION & PARAMETERS

(Ref: ynor_unified_prompts.json)

2.1 Configuration Strata

Persona	Stratum	Operational Mode
Architectural PI	Stratum 3	Systemic Governance

Quantitative Regulator	Stratum 2	Financial Risk Audit
Geodynamic Analyst	Stratum 2	Navigation Vectoring
Security Substrate	Stratum 1	IP Isolation

2.2 Cognitive Layers

- **Mode 1**: Rapid Exploratory Synthesis.
- **Mode 2**: Structural Logical Verification.
- **Mode 3**: Real-time μ Optimization.
- **Mode 4**: Logical Isolation & IP Shield (V16.1).

⚙️ CHAPTER III: IMPLEMENTATION PROTOCOL

(Ref: MDL_YNOR_GPT_SETUP_GUIDE_FINAL.md)

3.1 Setup Procedure

- **Knowledge Base**: Upload the encapsulated directory `MDL_YNOR_GPT_UPLOAD_V3.zip`.
- **Operating Instructions**: Implement the identity block within the system prompt field.
- **API Nexus**: Configure the OpenAPI 3.1.0 specification with `getSystemStatus` and `computeYnorMu`.

3.2 Intellectual Property & Confidentiality

- **FCA Compliance**: All interactions are subject to the Formal Confidentiality Agreement.
- **Proprietary Shielding**: Unauthorized access to architectural weights triggers immediate IP protection protocols.

♟️ CHAPTER IV: FRACTAL ARCHITECTURAL SUBSTRATE

(Ref: YNOR_FRACTAL_ULTIMATE_FRAMEWORK.json)

4.1 Recursive Chiastic Nodes

The substrate maintains a recursive chiastic structure ensuring that every sub-module acts as a fractal representation of the core viability principle.

4.2 Viability Strata (Subscription Levels)

- **Stratum 🎓 (Exploratory)**: 0€ / Month. 100 requests/day.
- **Stratum ⚡ (Applied)**: 29.90€ / Month. Full Synchronization.
- **Stratum 👑 (Systemic Integration)**: 499€ / Month. Optimal Enterprise Capacity.
